PROFESSIONAL SUMMARY

Data Engineering student at UC Berkeley with production experience building ETL pipelines, RAG-integrated data systems, and ML-driven analytics across tech and consumer platforms. Skilled in Python, SQL, and cloud-adjacent tooling; track record of shipping data infrastructure that serves real users at scale.

EDUCATION

University of California, Berkeley

Berkeley, CA

B.A., Data Science | SCET Certificate in Entrepreneurship & Technology. GPA: 3.4.

May 2026

Relevant Coursework: Data Structures and Object Oriented Programming, Discrete Mathematics and Probability, Principles & Techniques of Data Science, Data Engineering, Multivariable Calculus, Linear Algebra and Differential Equations

EXPERIENCE

Full Stack Developer

Aug 2025 – April 2026

Vectorly

Berkeley, CA

- Engineered a full-stack web app using React (component-based architecture) and FastAPI, optimizing backend performance via database indexing for 1K early users
- Built and optimized Python/SQL ETL pipelines for Vectorly's production platform using modular, AI-assisted code to automate data cleaning and transformation, improving compute efficiency by 60%

Data Engineer

Sept 2024 – May 2026

Student Government (Data and Modeling Team)

Berkeley, CA

- Automated financial data workflows via Python/SQL ETL pipelines, improving reliability and cutting processing time by 60%, enabling faster user interactions
- Built a PDF-to-structured-data pipeline using Python (PyPDF, pandas) to standardize Excel inputs into 9+ unified schema fields; implemented RAG-based search for natural language queries over financial documents used by 30K+ UC Berkeley students

Data Engineering Intern

June 2024 – Aug 2024

Afterwork

San Francisco, CA

- Developed ML algorithms (k-means, decision trees, PCA, logistic regression) to perform unsupervised customer segmentation on 200,000+ users, increasing product penetration by 10%
- Built customer profiles of distinct user groups, enhancing targeted marketing and improving user engagement by 15%

Data Engineering Intern

June 2023 – Aug 2023

USC Alfred E. Mann Institute

San Francisco, CA

- Engineered a geospatial ETL pipeline with RAG integration for natural language queries over LA County's COVID-19 workplace exposure dataset; combined vector embeddings with restaurant, employee count, and location metadata into a searchable model
- Implemented geofencing logic for restaurants within a 2-mile radius; served exposure statistics via API-driven UI components

PROJECTS

MCP Server Tester

Oct 2025

Python

- Architected an end-to-end web application enabling developers to register MCP servers, discover available tools via JSON-RPC protocol, and run configurable latency experiments
- Calculated and visualized performance metrics including min/max latency, percentiles (p50, p95), and success rates

Semi-Structured Data Analytics Pipeline (MongoDB + Postgres)

Nov 2025

Python, SQL, MongoDB, Postgres

- Developed and optimized analytical pipelines across MongoDB, Postgres, and Pandas, transforming nested JSON Yelp documents into structured datasets, aggregating missing-value patterns, and executing cross-collection joins

DoorDash Wrap

Aug 2023 – Dec 2023

Data Engineering Project

- Built feature pipelines modeling spend behavior and ordering patterns; applied clustering to surface personalized restaurant recommendations and year-end insights

SKILLS

Languages: Python, SQL, Java, JavaScript, HTML, CSS

Libraries: pandas, NumPy, scikit-learn, XGBoost, LightGBM, TensorFlow, Matplotlib, NLTK, spaCy
